AN INVESTMENT THAT PAYS YOU BACK

Some competitors are content to design and build a forklift with systems bought off the shelf. Toyota demands better for its customers. It's a forklift with better components and meticulously planned integrated systems that work together to deliver intuitive, dependable performance day after day. Toyota forklifts don't often require service. But when they do, it's fast and easy — by design. And legendary Toyota quality means more productivity over the lifecycle of your forklift, along with lower repair costs. Higher residual value is another bonus.

YOU, GETTING MORE DONE

Intuitive controls work like you think they should, and let you control lift and auxiliary functions with ease. Lift or lower while controlling reach or tilt, too, saving valuable seconds in each cycle. Get increased traction to move quickly between delivery points with large tires that also decrease wear, keeping tire replacement to a minimum. Accomplish more, more efficiently.
